Summary

An aspiring AI and Data Science professional with a good academic background and practical experience in Machine Learning, Deep Learning, and Computer Vision. Currently learning Data Structures and Algorithms (DSA) to improve problem-solving skills. Interested in using AI to solve real-world problems and create useful, scalable solutions. Always eager to learn new technologies and contribute to meaningful projects in the field of AI and Data Science.

Education

D.J.Sanghvi College of Engineering, Mumbai 2023-2027
B.Tech in Artificial Intelligence(AI) and Data Science CGPA – 9.29

Jiten Mody Junior College, Mumbai 2021-2023
Higher Secondary School Certificate Percentage – 86.00%
Mht-Cet Percentile – 99.65

Skills

Programming Languages – Java, Python, C, Cloud (AWS), SQL, Tensorflow
Web Development – HTML, CSS, JavaScript
Data Structures & Algorithms– Arrays, Linked Lists, Stacks, Queues, Sorting, Two Pointers, Recursion
Problem Solving – Solved 150+ DSA Problems on LeetCode
Artificial Intelligence – ML, DL, Computer Vision, Langchain along with Agentic AI, RAG, Langgraph
Languages – English, Hindi, Gujarati

Projects

Smart Attendance System* – *GitHub

- Developed an AI-powered attendance system using OpenCV and deep learning for real-time face detection and recognition
- Automated attendance marking, reducing manual effort and enhancing accuracy.
- Improved security and reliability with contactless tracking, minimizing the risk of proxy attendance.
- Optimized model performance to handle everything varying lightning conditions and facial angles for improved detection accuracy.

Suspicious Activity Detection* – *GitHub

- Built a real-time surveillance system using OpenCV, YOLO, and deep learning to detect suspicious activities.
- Enhanced security by enabling automated alerts and reducing manual monitoring efforts.
- Implemented object detection and behavior analysis to identify anomalies in live video feeds with high accuracy.
- Improved detection reliability by training the model on diverse datasets to recognize various suspicious behaviors.

Smart Parking Scanner* – *GitHub

- Developed a real-time parking space detection system using OpenCV, YOLO, and deep learning to identify empty spots.
- Streamlined parking by reducing search time and improving efficiency.
- Integrated real-time image processing and object detection to enhance accuracy and adaptability across diverse parking environments.
- Optimized model performance to handle varying lighting conditions and vehicle types for consistent detection.
